

Stormwater Management Facility Improvements

Site 25 - TRCA Outfall 28 | Newsletter #1 | August 2022

Improvements are coming

The City of Vaughan is undertaking important municipal infrastructure improvements to various stormwater management facility and outfall locations. Stormwater management facilities are designed and built to collect rainfall and surface water runoff.

As part of the 2022 Capital Works Program, the City is planning improvements to Site 25, Toronto and Region Conservation Authority (TRCA) Outfall 28, near Brasswinds Court in Mapes Park. These enhancements support the City's continued commitment to ensuring long-term sustainability of municipal infrastructure.

Construction is expected to begin in the fall of 2023.

Pre-construction Field Work

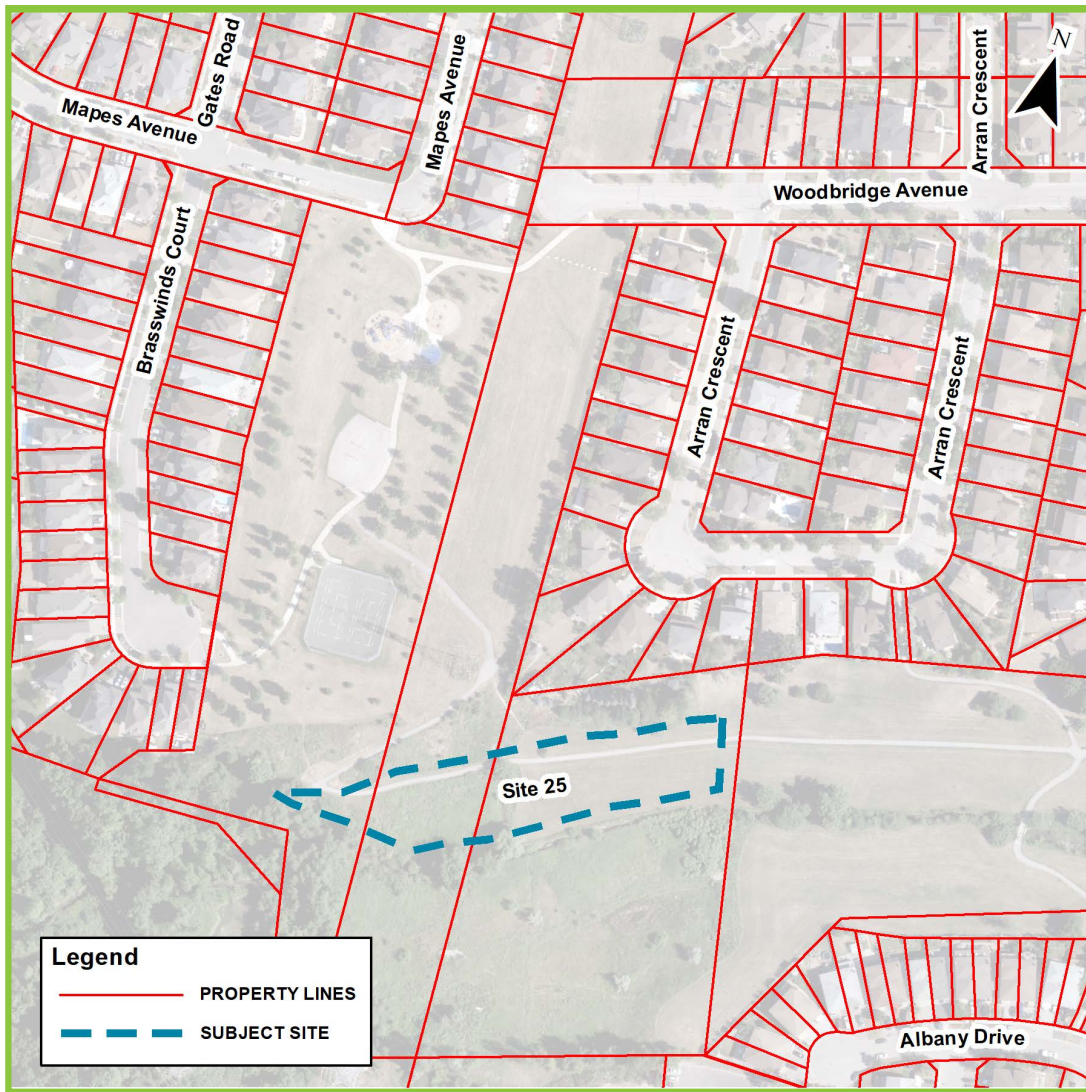

Pre-construction field work is underway, with City-retained engineering consultants in your neighbourhood conducting investigation activities including topographic and/or legal surveys, geotechnical boreholes and other field investigation works. The various underground utilities (i.e., gas, telephone and hydro) are identified by different coloured paint markings.

Traffic Impacts

All roads will remain open to traffic while the field investigation work is being carried out, under the direction of the Infrastructure Delivery department.

Project Updates

Newsletter #2 will be issued prior to construction to provide further details including approximate construction start and end dates. Updates will also be available at vaughan.ca/SWMF.
